Information

- **SPORT MEDIX:** 3 mm blue sport top cover, and a semi rigid core. This orthotic is designed to provide full arch support. Fits best in wide, casual, and sport shoes.
- **MARATHON:** 3 mm black sport top cover, semi rigid core, and 3 mm arch fill. This orthotic is designed to provide extra support in the arch and heel area, and has great shock absorption. It is best used for those running long distances or participating in any form of physical activity.
- **SUPER FLEX:** 3 mm black sport top cover, semi flex core, and 3 mm arch fill support. This orthotic is designed for those who stand on their feet for long periods of time. Fits best in walking, running, and wide casual shoes.
- **SAFETY MEDIX:** 3 mm black sport top cover, semi rigid core, 1.5 mm additional forefoot cushion, and 3 mm arch fill support. This orthotic is designed for safety shoes and work boots. It provides the best form of motion control and has great shock absorption.
- **CASUAL:** vinyl top cover (can also be made using leather, microcell or suede material), semi rigid core, and 2 mm mid layer cushion. This orthotic is designed to provide the best form of support for the arch and heels. Fits in regular shoes.
- **DRESS:** vinyl top cover (can also be made using leather, microcell or suede material), semi rigid core, and 1 mm cushion. This orthotic is designed for casual shoes and provides excellent arch support.
- **DRESS SLENDER:** vinyl top cover (can also be made using leather, microcell or suede material), semi rigid core, and 1 mm cushion. This orthotics slim design is best used for high heel shoes.
- **COBRA PATTERN:** vinyl top cover (can also be made using leather, microcell or suede material), semi rigid core, and 1 mm cushion. The shell used in this orthotic has a specific shape that fits best in high heel shoes to provide the best form of arch support.

CHILDREN'S PEDIATRIC:

- **UCBL (The University of California-Berkeley Laboratory):** 3 mm funky kids top cover, and semi-rigid core. It is custom made to stabilize the heel and works best for those who have a foot deformity. The UCBL has a deep heel cup, as well as a medial and lateral wall which helps hold the foot in a neutral position. It provides excellent control in the medial arch and lateral foot. Many cases of pes plano-valgus can be corrected using a UCBL with good medial support.
- **ROBERT WHITMAN (RW):** funky kids top cover (can also be made using leather, microcell or suede material), and semi-rigid core. The Robert Whitman orthotic is designed to provide maximum support for excessive pronation. It is made with a deep heel cup, medial wall, and lateral clip. In comparison to the UCBL, RW has more control and supports lateral clip.
- **INDUCE TOE-IN:** vinyl top cover (can also be made using leather, microcell or suede material), polypropylene core cut proximal to the 1st metatarsal head and extend distal from 5th metatarsal head to the 5th toe. This Out-Toe Gait Plate device is specifically used for patients that have an **Out-Toe** gait abnormality.
- **INDUCE TOE-OUT:** vinyl top cover (can also be made using leather, microcell or suede material), polypropylene core cut proximal to the 4th and 5th metatarsal head and extended from distal 1st metatarsal head to 1st toe. This In-Toe Gait Plate Device is specifically used for patients who have **In-Toe** Abnormalities.

- **ACCOMMODATIVE MEDIX:** vinyl top cover (can also be made using leather, microcell or suede material), EVA core, and 4 mm cushion. This orthotic is designed to provide the patient with a comfortable cushion insole. Additionally, it helps to re-distribute the patient's body weight. This orthotic can be used for diabetic patients.

- **DIABETIC MEDIX:** beige vinyl top cover (can also be made using leather, microcell or suede material), 1 mm polypropylene core, EVA arch fill, and Plastazote cushion. This orthotic is specifically designed for diabetic and/or senior patients.

- **SOFT COMFORT:** beige vinyl top cover (can also be made using leather, microcell or suede material), semi flex core, EVA arch fill, and 2 mm cushion. This orthotic has a thin design that comes with cushioning to provide a comfortable product for the patient. Fits best in casual shoes.

ELITE MEDIX(NEW)

The following two are new materials that can be used as a core in the orthotics:

- **XT SPRINT:** a unique polymer matrix used to create a thin, strong, and sturdy orthotic.
- **CARBON FIBER (CF):** Carbon Fiber with resin material creates an extremely strong shell. This material is resistant to water, salt water, and soap.
- **XT SPORT MEDIX:** 3 mm bamboo top cover, rigid XT Sprint core, and 3 mm sport cushion. This orthotic is designed to have a low heel cup, and provides full function arch support.

- **XT CASUAL MEDIX:** vinyl top cover, rigid XT Sprint core, and 2 mm cushion. Fits best in casual shoes.

- **XT DRESS MEDIX:** vinyl top cover, rigid XT Sprint core, and 2 mm cushion. Fits best in dress shoes.

- **CF SPORT MEDIX:** 3 mm bamboo top cover, CF core, and 3 mm sport cushion. Fits best in sport shoes.

- **CF CASUAL:** vinyl top cover, CF core, and 3 mm cushion. Fits best in casual shoes.
